Election/Restrictions

Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in response to this action, to elect a single invention to which the claims must be restricted.

Restriction to one of the following inventions is required under 35 U.S.C. 121:

Group I, claim(s) 1-6 and 9, drawn to a method of protecting plants from fungal attack,

Group II, claim(s) 7-8 drawn to a *Rhizoctonia* strain and compositions thereof

Group III, claim(s) 10 drawn to a primer.

The inventions listed as Groups I-III do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons:

First, the inventions of groups II and III do not match a permitted category as PCT Rule 13.2 does not provide for multiple methods or products in one category. Two functionally distinct products are claimed having distinct purposes, i.e., *Rhizoctonia* strains and a primer suitable for identifying certain *Rhizoctonia* strains. No common inventive concept is shared among groups II and III since the compositions as claimed are not the same functionally and physiologically and have different purposes and utility.

Second, no common inventive concept is shared among groups I and II, since a technical relationship is lacking among the claimed inventions involving one or more special technical features because a process of using *Rhizoctonia* strains for the protection of plant as claimed is known in the art (See, e.g., Sneh, page 12 et seq.). The requirement of unity of invention is not fulfilled because there is no technical relationship among those inventions involving one or more of the same or corresponding special technical features. The expression "special technical features" means those technical features that define a contribution which each of the claimed inventions, considered as a whole, makes over the prior art.

Therefore, the method of protection of plants lacks those technical features that define a contribution which each of the inventions considered as a whole, makes over the prior art. Therefore, a technical relationship is lacking among the claimed inventions involving one or more special technical features.

Additional Restriction Requirement

The claims of Groups I-III are drawn to a multitude of nucleic acids (SEQ ID NO:15-28 and SEQ ID NO:7-14, compositions and methods which use these compounds. This constitutes a recitation of an implied, mis-joined Markush group that contains multiple, independent and distinct inventions. Each of the different nucleic acids, compositions and methods of use are independent and distinct because no common structural or functional properties are shared. Accordingly, these claims are subject to restriction under 35 U.S.C. § 121.

Upon election of one of Groups I, II and III, Applicant is additionally required to elect a single nucleic acid. This requirement is not to be construed as a requirement for an election of species, since each of the compounds recited in alternative form is not a member of a single genus of invention, but constitutes an independent and patentably distinct invention. Applicant is further required to indicate which claims are readable on the elected invention.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a petition under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(I).
